Full-Stack Developer (Junior Level)

React | Java | Node.js | SQL | APIs | React Native | Python | n8n | Advanced English (C1)

PROFESSIONAL SUMMARY

Junior Full-Stack Developer focused on front-end React/React Native and back-end Node.js and Java, building end-to-end applications with API integrations, authentication, and SQL persistence. Anchor project: mobile finance app with custom API, synchronization, and database. Practical experience in internship developing AI automations that reduced manual tasks by 80%, freeing teams for strategic activities. Creative problem-solving profile, accelerated learning, and high delivery capacity. Seeking Junior position to contribute to full-stack features and expand expertise in Java (Spring) and architecture.

TECHNICAL EXPERTISE

- Front-end: React, React Native, HTML5, CSS3, PWAs, Responsive interfaces
- Back-end: Node.js, Express, Java (Spring Boot), REST APIs, JWT/OAuth2 authentication
- Databases: SQL (PostgreSQL/MySQL/SQLite), Supabase, modeling and queries, migrations
- Languages: JavaScript (ES6+), TypeScript, Java, Python
- DevOps/Infrastructure: Git/GitHub, Postman, GitHub Actions (basic), Docker (concepts), Vercel/Render/Fly.io
- Architecture: Layered architecture, DTOs, validation, pagination, error handling, basic logging
- Differentiators: API integrations, n8n, AI agents, automation, Figma

PROFESSIONAL EXPERIENCE & PROJECTS

Automation Development Intern — Elite Master (2025)

- Developed n8n automations and AI agents that reduced manual tasks by 80% across multiple departments, increasing productivity and freeing teams for strategic activities
- Implemented integrations with APIs and auxiliary services (Node/Python), including authentication and payload normalization, enhancing reliability and delivery speed
- Front-end contributions with React (UI adjustments, features, fixes), reinforcing usability and visual consistency
- Maintained n8n workflows for orchestration, logging, and retries; technical documentation of endpoints and flows

Personal Project — Finance App (Full-Stack)

Technologies: React Native, Node.js/Express, SQL, JWT, APIs

- Finance app with income/expenses, categories, charts, offline-first architecture and API synchronization
- Node.js back-end with JWT-protected endpoints, migrations/seed, pagination, and error handling
- Results: Functional MVP with responsive interface, automated deployment pipeline, and scalable architecture for future implementations
- Complete documentation and roadmap for TypeScript migration with automated testing

EDUCATION

Technology Degree in Systems Analysis and Development

Cruzeiro do Sul University — MG | 2025 — 2027 (in progress)

Relevant coursework: Data Structures, Databases, Networks, Web Development, Software Engineering

Certifications

- EF SET English Certificate — C1 (Advanced)
- Santander Open Academy — Python
- Microsoft — AI Prompting
- MIT — Digital Transformation
- Cisco — Cyber Threat Management

SOFT SKILLS

- Creative problem-solving with analytical approach
- Accelerated learning and quick adaptation to new technologies
- Remote collaboration and effective communication in distributed teams
- Proactivity in identifying and solving technical bottlenecks
